

COMPUTER PROGRAMMING SAFETY

Why worry about safety?

Good programming involves some precaution. Consider the following to avoid computer problems and improve security.

DO PRACTICE:

- saving programs when making changes
- using strong & different passwords to access personal data
- understanding terms & conditions before accepting

DON'T PRACTICE:

- only saving programs once finished
- using the same, simple password for everything
- sharing personal data freely
- agreeing to everything that pops up on your computer
